

CUBODOMO

THE SMART TIMED THERMOSTAT ALWAYS WITH YOU

MADE IN ITALY

Lots of users, **DIFFERENT HABITS**

Nowadays heating management has changed: new lifestyles bring us to be away from home for a long time for working, having fun, traveling ...
Imagine if you could adjust heating according to your needs and control temperature remotely.

HOLIDAY HOME

FAMILY

TURN YOUR SYSTEM
FROM SINGLE ZONE TO MULTIZONE:
choose your configuration!

1 Starter Pack:

It replaces the old timed thermostat and manages boiler switching on/off remotely.

2 Starter Pack + Actuators:

Thanks to the actuators you can control each radiator and therefore each room, dividing your house into several zones.

3 Starter Pack + Actuators + Probes without relay:

For a more precise system, you can install additional probes; you will achieve a more accurate measuring of the room temperature.

4 Starter Pack + Probes with relay:

If you have timed thermostats wired in each room, you can replace them with probes with relay and create a smart multizone system.

5 Starter Pack + Wiring center + Probes without relay:

Turn a radiant system from single zone into multizone with no masonry work. Thanks to the wiring center and a probe without relay in each zone, you will be able to control temperature in each room remotely.

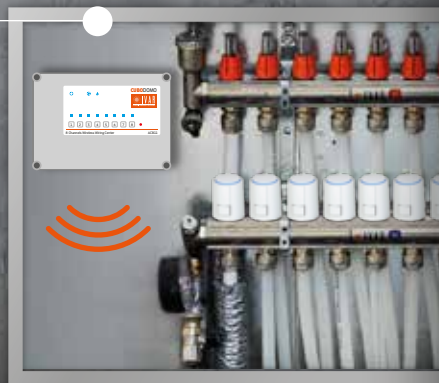

THE PROBE

THE CUBE

THE WIRING
CENTER

THE SYSTEM

Cubodomo is able to adjust temperature in all the house zones, turning smartphone and tablet in a multizone timed thermostat.

FLEXIBLE and MODULAR

System modularity guarantees highest flexibility. Each user can set the system according to his/her needs and add new devices. Each component can be integrated whenever you want in order to customise the system depending on your needs.

THE APP

THE ACTUATOR

3 reasons to choose CUBODOMO

CONTROL

YOUR HOME TEMPERATURE
WHEREVER YOU ARE

ADJUST

COMFORT ACCORDING TO YOUR NEEDS
EASILY AND QUICKLY

SAVE

UP TO 40% ON HEATING COSTS

Smart temperature regulation
designed by those who have been
dealing with heating systems for over
30 years

STARTER PACK

STARTER PACK: The CUBE

Where hydraulics and building automation meet.

Direct control

STARTER PACK: The MASTER PROBE

The cube is the "system intelligence" and collects all user's settings.

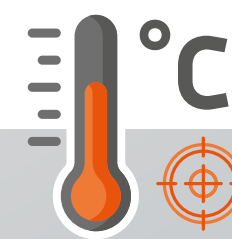

It communicates with smartphones and tablets via your Wi-Fi net.

It interacts with all the elements of the system wirelessly.

The probe included in the Starter Pack* manages boiler switching on or zone valve opening thanks to an internal relay.

It measures real temperature (not temperature close to the radiator) of the room where it is installed.

It interacts with the cube wirelessly.

* It can be installed only by professionals

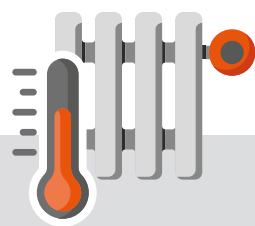

ACTUATORS

Excellent performances

PROBES without RELAY

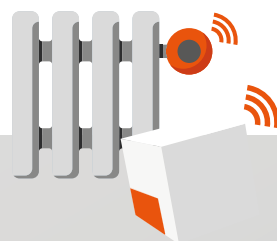

Highest precision.

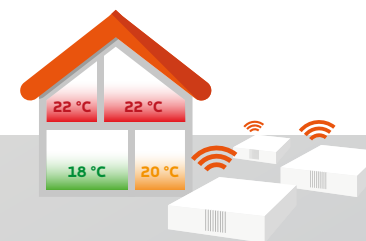

Actuators allow perfect temperature regulation of each radiator equipped with thermostatic valve.

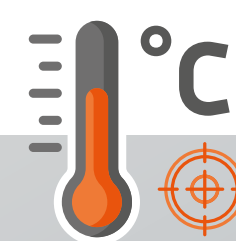

The temperature in each room can be controlled individually.

The cube can manage up to 28 devices (actuators or probes)

For more accurate temperature measuring, you can install additional probes without relay for each room.

Probes measure real room temperature giving precise data which guarantees the most efficient temperature regulation, differently from systems where temperature close to the radiator is measured.

They interact with the cube wirelessly.

THE PROBES WITH RELAY

Multizone radiant system

WIRING CENTER

Wireless efficiency

Temperature sensor on board

Trasmission radio frequency 868 Mhz

Batteries included

Relay for boiler switch on/off or zone valve managing

Suitable for MULTIZONE RADIANT SYSTEMS

On-Off diagnostics of heads, pump relay and boiler relay

Trasmission radio frequency 868 Mhz

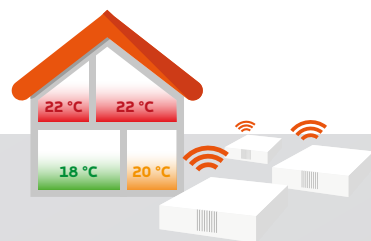

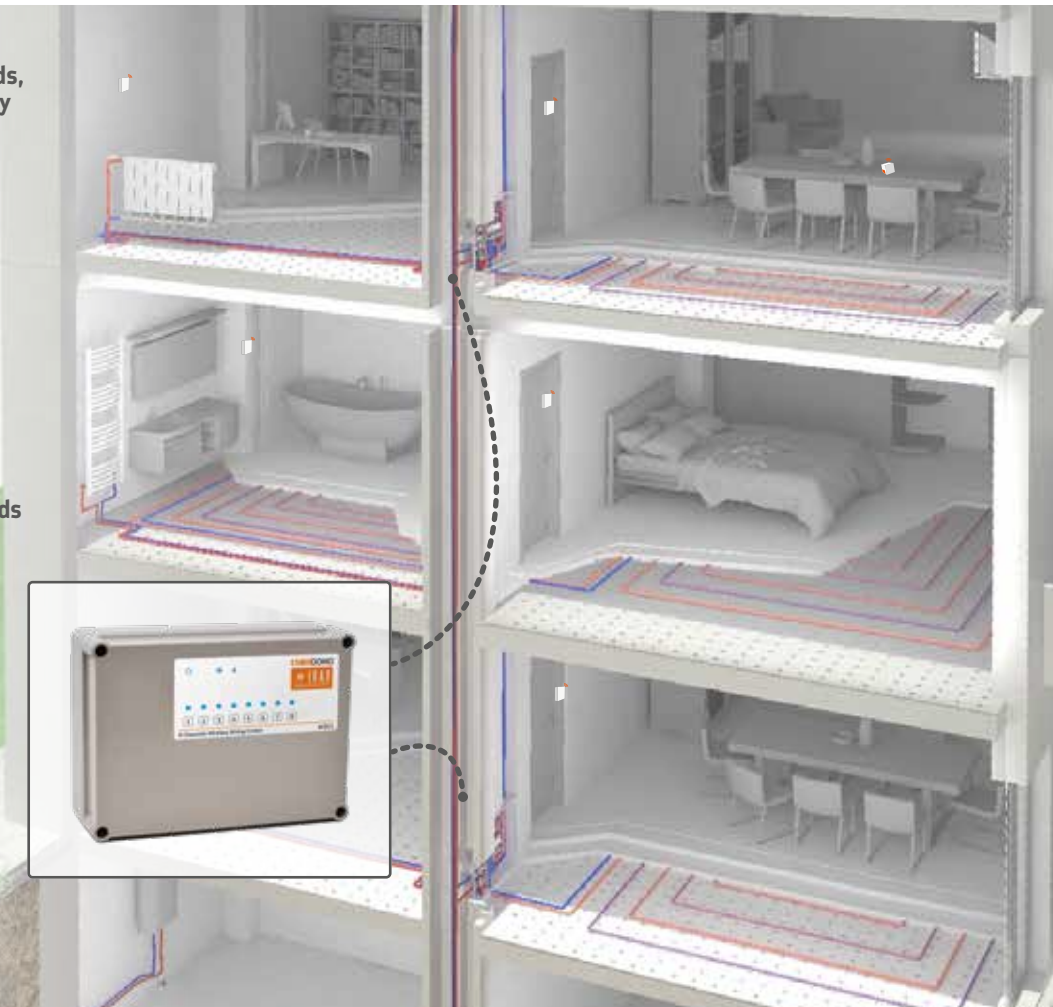

230V power supply for 2-wire electrothermal heads command

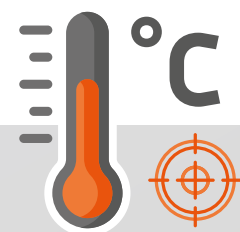

2 relays with contacts for zone valve or pump command and boiler request

Ideal for MULTIZONE RADIANT SYSTEMS

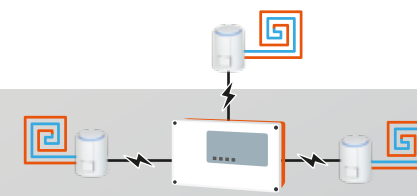

You can replace all the timed thermostats with additional probes with relay and control temperature in each zone; in radiant systems, too.

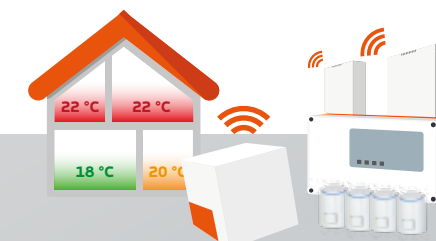

Probes measure real room temperature, differently from systems where temperature close to the radiator is measured.

They interact with the cube wirelessly.

Combined with electrothermal heads, it manages opening/closure of radiant system circuits.

Interacting with the cube and temperature probes, it can adjust temperature in each room.

It turns a radiant system from single zone to multizone (up to 8 zones per board).

THE APP

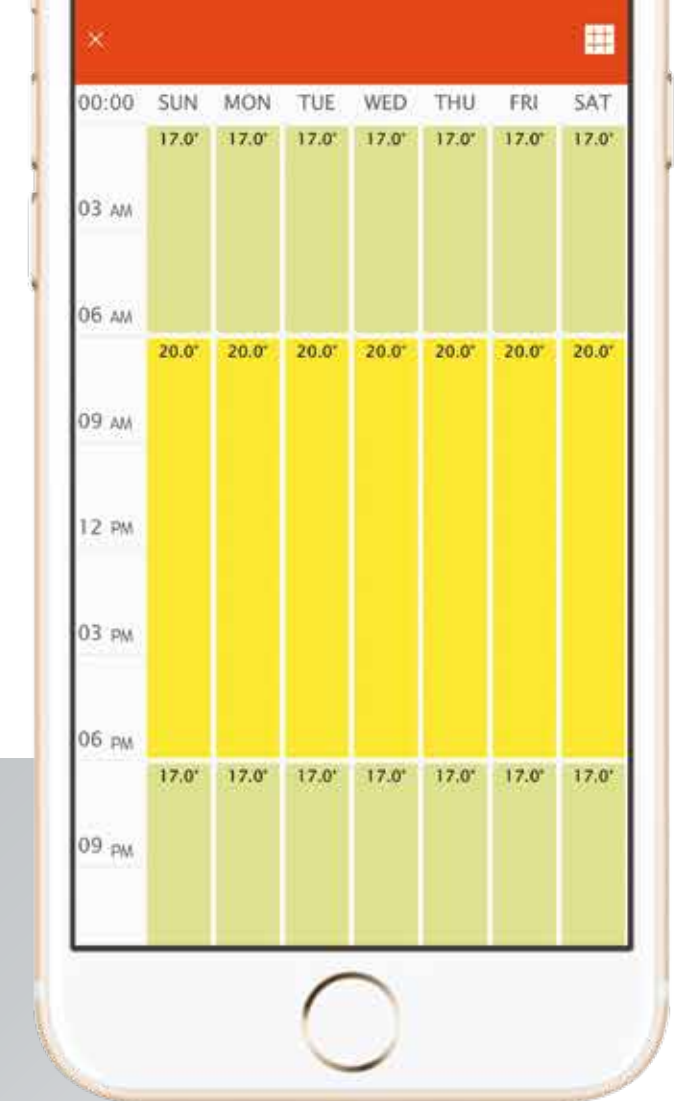

Control whenever,
wherever you are

Thanks to MyCUBODOMO app, control of your system is always at your fingertips, by means of smartphone or tablet.
